The *MRC Activities* programs are designed for patients undergoing treatment with the *Myobrace*[®], *Myosa*[®] or *Myotalea*[®] appliances by *Myofunctional Research Co. (MRC)*. The activity programs are used in conjunction with *MRC* appliances and allow practitioners and patients the opportunity to optimise treatment outcomes through a series of breathing and myofunctional exercises.

Myobrace[®] Activities

Designed specifically for patients undergoing treatment using the *Myobrace*[®] appliances, the *Myobrace*[®] *Activities* programs focus on correcting the poor myofunctional habits that are the root cause of malocclusion and underdeveloped jaws. A *Fast Track* variation of the programs is also available for practitioners looking for a more streamlined approach to getting started.

Myosa[®] Activities

Designed specifically for patients undergoing treatment using the *Myosa*[®] appliances, the *Myosa*[®] *Activities* focus on addressing the underlying breathing and myofunctional habits that contribute to Sleep-Related Breathing Disorders and TMJ problems. A *Fast Track* variation of the programs is also available for practitioners looking for a more streamlined approach to getting started.

PRICING

Contact your nearest *MRC* representative today for more information or complete the online inquiry form.

Fast Track Activities Programs
\$300 USD annually*
